GLASS TRANSPORT SYSTEMS

# THE GLASS CARRYING SPECIALISTS

PART OF **Bevan** <sup>GROUP</sup>

## THE GO-TO COMPANY FOR GLASS, WINDOW AND SPECIALIST PRODUCT TRANSPORT SOLUTIONS

Professional, experienced and skilled in what we do best, Supertrucks specialise in whole vehicle glass-carrying systems, van conversions and much more. With over 40 years' experience serving businesses across the UK and Europe, we provide bespoke commercial vehicle conversions to suit your requirements and budget.

We invented the glass carrying rack and named it the frail, after the characteristic of the material it was designed to carry safely. You'll still hear glass carrying racks called frails to this day.

Based in St Helens at the heart of the glass industry, we work with high-profile blue-chip companies and sole traders alike, offering all customers the same excellent standard of products and services that the Supertrucks name has become synonymous with over 40 years of trading.

## WORKING WITH SUPERTRUCKS

Choose a glass van rack from Supertrucks and you'll benefit from:

### 1 BESPOKE ENGINEERING

Everything we manufacture is bespoke. Whatever your requirement, you'll have the best van conversion for the job.

### 2 QUALITY MANUFACTURING

We use the highest-grade aluminium and purpose-made rubber sections and components to produce our glass racks, providing you with a reliable and robust solution that's built to go the distance.

### 3 MINIMUM DISRUPTION

You don't have to stop working while your vehicle is being converted; we'll collect your van on a Friday and return the fully converted vehicle to you on a Monday.

### 4 COMPLIANT SYSTEMS

All our conversions are completed with safety in mind and adhere to the latest industry regulations, including side lighting standards.

### 5 NO LEASE HIRE PENALTIES

In most instances we don't drill the sides of vehicles to fit our glass carriers, so you don't have to worry about damage – and you won't be penalised if your van is leased or rented.

### 6 END-TO-END SERVICE

We can provide a fully converted, fully liveried vehicle – delivered directly to your door. In some instances, we can even give you a cheaper price than most dealers too!

### 7 PEACE OF MIND

All our glass racks come with a four-year warranty, as standard. Conditions apply.

## VAN AND BOX CONVERSIONS

Explore bespoke van racking systems, from panel van conversions to detachable racking systems for use across multiple vehicles.

### GLASS RACKS FOR VANS

If you need to convert your panel van into a glass carrying vehicle, we're here to help. We provide glass racks for vans that are tailored to meet our customers' needs. From the smallest car-derived glass van to 45ft glass truck trailers, our team of experts can produce and install bespoke glass racks for all vehicle makes and models.

### DETACHABLE GLASS RACKS FOR VANS

Detachable glass racks are the perfect option if you don't need to use your racking system all the time, or if you'd like to use it on multiple vehicles. Our detachable glass transport racks are designed to be easily attached and removed from your vehicle.

To compare the features and options available across our product range, go to page 12.

## GLASS VAN RACK WITH TELESCOPIC EXTENSION

If you need to carry large sheets of glass or have an overall height restriction to work within, our van racking systems with telescopic extensions provide the additional height you need to safely carry larger products. Our unique Rack-in-Rack system allows the telescopic extension to be easily extended and retracted in minutes.

## ROOF RACKS FOR VANS

Manufactured using patented mill finish aluminium extrusions, our roof racks feature front radius wind deflectors, slim line side upstands and a 500mm tall rear high impact roller. Our team of specialists can fit your roof rack alongside a glass rack or as a standalone product.

## INTERIOR GLASS TRANSPORT VAN CONVERSION

Our interior glass transport systems are designed to maximise your vehicle's carrying capacity. Constructed from lightweight aluminium, faced with felt and featuring a rear shelf and non-slip body overlay in the load area, an interior van racking system can be fitted to either or both sides of your vehicle.

## LADDER RACKS FOR VANS

Our ladder racks offer quick, easy and safe access to your roof rack. There are two types of ladder available: a ladder rung system integrated into the rear of the glass rack and a ladder fixed to the rear door.

## MULTI-PURPOSE VAN RACK

A crucial tool for the day-to-day operation of many businesses transporting bigger and heavier glass products, the multi-purpose van rack can carry windows, glass, doors, bi-folds, orangeries and more.

**To compare the features and options available across our product range, go to page 12.**

## SPECIALIST BUILDS

**Our A Frame glass racks are made from patented aluminium extrusions which are CNC machined for strength and durability.**

Available as fixed height or with telescopic extension, the A Frame can be fitted to most vehicle makes and models. We can build up from a basic chassis cab only, retrofit to an existing flatbed and even convert a dropside vehicle to allow for an A Frame to be fitted. We can also supply standalone A Frames for fixing to flatbed vehicles.

The A Frame glass rack can be fitted to one or both sides of a vehicle to maximise carrying space. The glass is held vertically by Supertrucks poles with sliding rubber clamp blocks (system 1) or with optional adjustable scissor clamps (system 2), allowing for safe and efficient transportation. This also enables the movement of other products such as window frames and garage doors.

# TRUCK CONVERSIONS

We offer whole vehicle glass-carrying systems that are bespoke to customer requirements. Vehicle bodies are custom-built and mounted to a chassis ranging from 3.5 tonnes to 32 tonnes GVW. Options include:

## BODY STYLES

Solid-sided, curtain-sided, a combination of solid and curtain-sides, or canopy covered.

## SAFETY FEATURES

Inclinometers, marker boards, reflectors, pole rests, cameras and side scan systems.

## ROOF

Fixed, solid sliding or concertina opening.

## SECURING SYSTEMS

Options include sliding rubber wedge exterior poles (system 1), patented scissor clamp exterior poles (system 2), multi-strap systems, tie-on interior poles, turn-lock interior poles and pack stops.

## REAR OF VEHICLE

For a fixed roof model, we offer roll-back curtains with a drop-down tailgate, solid double doors, a walk-in ramp or tail door.

## EXTRA OPTIONS

Additional options include floor-mounted load-securing tracks, tail lifts, rear-mounted forklift truck, cranes (including Hiabs), demount systems and trailers.
